DETAILED ACTION

Election/Restrictions

Claims 1, and 5-8 are generic and allowable. Accordingly, the restriction requirement as to the encompassed species is hereby withdrawn and claims 2-4 and 9-13, are no longer withdrawn from consideration since all of the claims to this species depend from or otherwise include each of the limitations of an allowed generic claim.

In view of the above noted withdrawal of the restriction requirement as to the linked species, applicant(s) are advised that if any claim(s) depending from or including all the limitations of the allowable generic linking claim(s) be presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Claims 1-13 are directed to an allowable product. Pursuant to the procedures set forth in the Official Gazette notice dated March 26, 1996 (1184 O.G. 86), claims 14-18, directed to the process of making or using the patentable product, previously withdrawn from consideration as a result of a restriction requirement, are now subject to being rejoined. Process claims 14-18 are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Reasons For Allowance

In view of the above rejoinder, claims 1-18 have been allowed over the prior art.

The following is an examiner's statement of reasons for allowance:

Regarding claim 1, prior art could not be located that taught a pressure-welded semiconductor device comprising a buffer conductive layer including conductive carbons disposed at at least one of a pressure welded portion between the first casing-side electrode and the element-side electrode disposed on the first main surface and a pressure-welded portion between the second casing-side electrode and the element-side electrode disposed on the second main surface.

With respect to claim 14, prior art could not be located that taught a method of manufacturing a pressure-welded semiconductor device comprising sandwiching and pressure-welding, with two casing plates having an electrode respectively disposed on surfaces thereof, the at least one semiconductor element having formed thereon the linear carbon structures.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2891

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art cited but not relied upon teaches the state of the art.
